Submitted (AUG-1993) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: IMP IS THE RATE LIMITING ENIYME IN THE BE NOVO SYNTHESIS
OF GUANINE NUCLECTIDES AND THEREFORE IS INVOLVED IN THE REGULATION
OF CELL GROWTH. IT MAY ALSO HAVE A ROLE IN THE DEVELOPMENT OF
MALIGNANCY AND THE GROWTH PROGRESSION OF SOME TUMORS.
-!- CATALYTIC ACTIVITY: Inosine 5'-phosphate + NAD(+) + H(2)O -

J. Biol. Chem. 263:15769-15772(1988).
-!- Chem. 263:15769-15772(1988).
-!- FUNCTION: IMP IS THE RATE LIMITING ENZYME IN THE DE NOVO SYNTHESIS
OF GUANINE NUCLECTIDES AND THEREFORE IS INVOLVED IN THE REGULATION
OF CELL GROWTH. IT MAY ALSO HAVE A ROLE IN THE DEVELOPMENT OF
MALIGNANCY AND THE GROWTH PROGRESSION OF SOME TUMORS.
-!- CATALYTIC ACTIVITY: Inosine 5'-phosphate + NaD(+) + H(2)0 =
xanthosine 5'-phosphate + NADH.
-!- PATHAXY: FIRST REACTION UNIQUE TO GMP BIOSYNTHESIS.
-!- SUBUNIT: HOWOTETRAMER.
-!- SIMILARITY: TO OTHER EUKARKOTIC AND PROKARYOTIC IMPDH AND TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ID IMD2_MOUSE STANDARD; PRT; 514 AA.

Biophys. Acta 1217:156-162(1994).

-1- FUNCTION: IMP IS THE RATE LIMITING ENIYME IN THE DE NOVO SYNTHESIS OF GUANINE NUCLEOTIDES AND THEREPORE IS INVOLVED IN THE REGULATION OF CELL GROWTH. IT MAY ALSO HAVE A ROLE IN THE DEVELOPMENT OF MALIGNANCY AND THE GROWTH PROGRESSION OF SOME TUMORS.

-1- CATALYTIC ACTIVITY: Inosine 5'-phosphate + NAD(+) + H(2)O =

"Complete genome sequence of the methanogenic archaeon, Methanococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                     PROSITE; PSO0487; IMP_DH_GMP_RED; 1.
Oxidoreductase; NAD; GMP biosynthesis; Purine biosynthesis; Repeat;
                                  CATALYTIC ACTIVITY: Inosine 5'-phosphate + NAD(+) + H(2)0 = xanthosine 5'-phosphate + NADH.
PATHWAY: FIRST REACTION UNIQUE TO GMP BIOSYNTHESIS.
SIMILARITY: TO OTHER EUKARYOTIC AND PROKARYOTIC IMPDH AND TO
"IMP dehydrogenase from Pneumocystis carinii as a potential drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
